

[Wooden pipes](#) have been used for hundreds of years. They are simple, elegant and are a great way to enjoy smoking tobacco. Wooden pipes are made from a variety of different woods and can be found in a range of different shapes and sizes.

Wooden pipes have been used for hundreds of years. They are simple, elegant and are a great way to enjoy smoking tobacco. Wooden pipes are made from a variety of different woods and can be found in a range of different shapes and sizes.

The most common types of wood used for making wooden tobacco pipes include:

Cherry – Cherrywood is one of the most popular types of wood used for making wood tobacco pipes because it is easy to work with, has an attractive grain pattern and smells good when cured. Cherrywood also produces good quality pipe stems that are strong but flexible enough to move with your jaw during use without breaking easily like other woods such as oak or maple do.

Maple – Maple is another popular choice for making wooden tobacco pipes because it tends to be harder than cherrywood so it lasts longer before needing to be replaced due to wear or cracking over time if left on its own (unfinished). It also produces excellent quality [pipe stems](#) that are hard but flexible enough to move with your jaw during use without
